

Instructions for fire hydrant cabinet installation and checking

1. Mount the fire hydrant cabinet firmly to straight wall.
Remove hose reel from the cabinet to facilitate the installation.
2. After the cabinet is installed connect the water supply and shut-off valve. Install hose reel back to cabinet and connect the joint hose. The mounting equipment is delivered with fire hydrant cabinet.
3. Check the connections by closing the jet tube and open the shut-off valve. Close the shut-off valve and the pressure remains in the hose. After a while open the jet tube and empty the hose.
4. Check that there are no folds on the hose and that the cabinet door works smoothly. Finally install the label to the door.
